

Power Line Safety Tips

Power lines are **ENERGIZED** and **DANGEROUS**.

LOOK UP > When outside in any season, **always know** where power lines are. When climbing a tree for fun, setting a ladder up, trimming branches, or cleaning leaves out of gutters.

LOOK OUT > While picking up limbs after an ice or wind storm, insure no power lines are in the area on the ground. You don't have to touch a power line to be **electrocuted**.

LOCATE > If you see a low hanging or a line on the ground, **stay at least 20 feet away**. Treat it as an energized line and call **911**. They will contact the right people to take care of the **DANGER**.
